

Amendments to the Specification

Please replace the abstract with the following:

ABSTRACT OF THE DISCLOSURE

A method capable of setting the receiving condition of a mobile communication terminal for an incoming call, Short Message Service (SMS) or Multi-media Message Service (MMS) in advance, is provided. In one embodiment of the present invention, a user of the mobile communication terminal can set the receiving condition for the incoming call, SMS or MMS differently in each CID and each time zone, so that the incoming call, SMS or MMS transmitted from a CID is processed to be received or reception-rejected by user's set conditions. According to the present invention, the user may conduct effective service reception management under a special user environment for terminals such as while asleep or at a meeting, etc.
